Abstract—This documents solves a problem based on fields.

#### 1 PROBLEM

Let  $\mathbb{F}$  be a set which contains exactly two elements,0 and 1.Define an addition and multiplication by tables.

$$\begin{array}{c|cccc} \cdot & 0 & 1 \\ \hline 0 & 0 & 0 \\ 1 & 0 & 1 \\ \end{array}$$

Verify that the set  $\mathbb{F}$ , together with these two operations, is a field.

#### 2 Solution

To prove that  $(\mathbb{F},+,\cdot)$  is a field we need to satisfy the following,

- 1) + and  $\cdot$  should be closed
  - For any a and b in  $\mathbb{F}$ ,  $a+b \in \mathbb{F}$  and  $a \cdot b \in \mathbb{F}$ . For example 0+0=0 and  $0\cdot 0=0$ .
- 2) + and  $\cdot$  should be commutative
  - For any a and b in  $\mathbb{F}$ , a+b=b+a and  $a \cdot b=b \cdot a$ . For example 0+1=1+0 and  $0 \cdot 1=1 \cdot 0$ .
- 3) + and  $\cdot$  should be associative
  - For any a and b in  $\mathbb{F}$ , a+(b+c)=(a+b)+c and  $a \cdot (b \cdot c)=(a \cdot b) \cdot c$ . For example 0+(1+0)=(0+1)+0 and  $0\cdot (1\cdot 0)=(0\cdot 1)\cdot 0$ .
- 4) + and · operations should have an identity element
  - If we perform a + 0 then for any value of a from  $\mathbb{F}$  the result will be a itself. Hence 0

is an identity element of + operation. If we perform  $a \cdot 1$  then for any value of a from  $\mathbb{F}$  the result will be a itself. Hence 1 is an identity element of  $\cdot$  operation.

- 5)  $\forall$  a  $\in$   $\mathbb{F}$  there exists an additive inverse
  - For additive inverse to exist, ∀ a in F a+(-a)=0. For example. 1-1=0 and 0-0=0.
- 6)  $\forall$  a  $\in$  F such that a is non zero there exists a multiplicative inverse
- For multiplicative inverse to exist, ∀ a such that
  a is non zero in F, a·a<sup>-1</sup>=1. For example 1·1<sup>-1</sup> =
  1.
- 7) + and  $\cdot$  should hold distributive property
  - For any a,b and c in  $\mathbb{F}$  the proberty  $a \cdot (b+c) = a \cdot b + a \cdot c$  should always hold true. For example  $0 \cdot (1+1) = 0 \cdot 1 + 0 \cdot 1$ .

### 3 RESULT

Since the above properties are satisfied we can say that  $(\mathbb{F},+,\cdot)$  is a field.
